Solarpunk

A game by Phil Grey
Artwork by Carlos Itsumi

Version 6.0

Game Pieces

21 Map Tiles
- 9 '+' Tiles (1 Starting Tile + 8 designs)
- 4 'T' Tiles (4 designs)
- 4 'L' Tiles (4 designs)
- 4 'I' Tiles (1 design)

8 Player Boards (2 each of 4 types)

16 cubes (4 each in 4 colours)

128 Building Cards
- 48 Tier 1
- 32 Tier 2
- 24 Tier 3
- 16 Tier 4
- 8 Tier 5

64 Upgrade Cards
- 40 Level 1 (10 each of 4 types)
- 24 Level 2 (6 each of 4 types)

64 Project Cards
- 20 Stage 1 (5 each of 2 types)
- 20 Stage 2 (5 each of 2 types)
- 20 Stage 3 (5 each of 2 types)
- 4 Stage 1|3 (Unique Cards)

64 Material Tokens (16 each of 4 types)

10 Blueprint Tokens

200 Population/Shared Tokens (50 each of 4 colours)

4 Prestige markers (1 each in 4 colours)

4 100 Prestige Tiles

40 Takeover Tokens (10 each of 4 colours)

30 Secured Tokens

50 Pollution Tokens

64 Discount Tokens (16 each of 4 types)

Setting & Theme

Solarpunk is a game where you take on the role of small community collecting resources and trying to build a better world, first by repurposing old structures, then creating dedicated and environmentally sound buildings that are in harmony with nature.

Buildings generate production, which is used both to bring down the costs of larger, more complex structures, and also to start long lasting projects that will give you advantages for the rest of the game.

Some buildings are special, and will grant you prestige, pushing you closer to victory. Other buildings will improve ecological harmony, or eco. Some buildings have unique upgrades that will allow you to use special game-changing effects once you build them.

Some building spaces, and some early, high-prestige buildings will actively harm eco, bringing the environment closer to collapse. Be mindful of this, as it can create a certain difficulty spike in the early game—like in real life, getting people to change habits and adopt new technology is fraught with difficulty.

You must also be mindful of the total space available to you, because if you fill the last square on the map, everyone loses due to overpopulation. Even the best laid plans can run afoul of people's desire for more space, or bigger families.

This means finding the ability to share buildings, or even being aggressive and taking them over yourself, may be better than trying to build every shiny thing you can lay your hands on. Be willing to try a new strategy if your current plan doesn't seem to be working. Adaptability is key to creating a sustainable future.

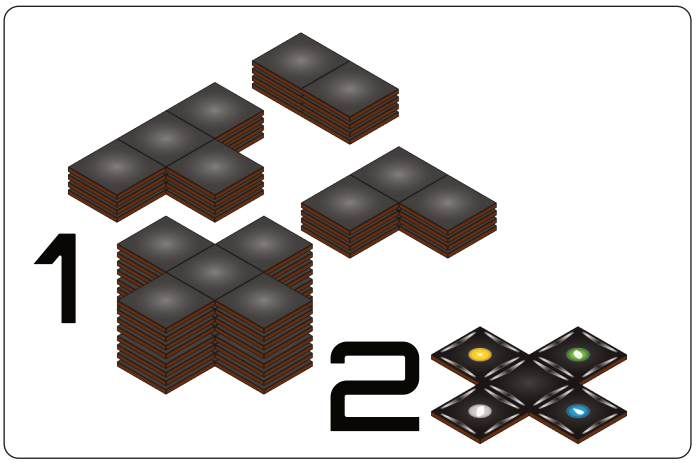

Game Setup

1. Sort out the available Map Tiles based on the number of players in the game.

Players	'+'	'T'	'L'	'I'
2	4*	4	0	0
3	8	0	4	0
4	8	4	4	4

*Remove the 4 '+' Map Tiles with Prestige (?) on them.

2. Place the starting Map Tile in the middle of the playing area.

3. Separate the Upgrade cards by level (+ or ++) and type (, , ,). Shuffle each deck and place them near the map.

4. Separate the Building cards by Tier (★, ★★, ★★★, ★★★★, and ★★★★★) Set aside the ★★★★★ cards then shuffle each remaining deck.

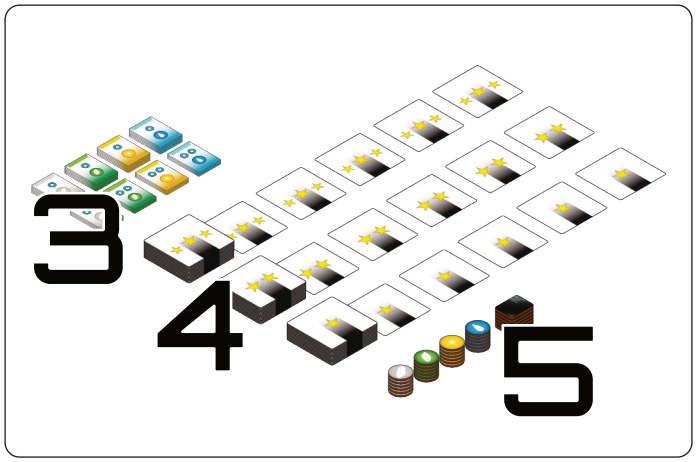

Flip the top 5 cards from each deck and spread them out to create a Building Queue for each Tier.

Sort the ★★★★★ cards by type (, , ,) and place them face up above the Building Queues.

5. Create stacks of starting Resources (, , , , +) based on the number of players in the game.

Players	Materials (, , ,)	Blueprints ( )
2	5	4
3	8	5
4	12	6

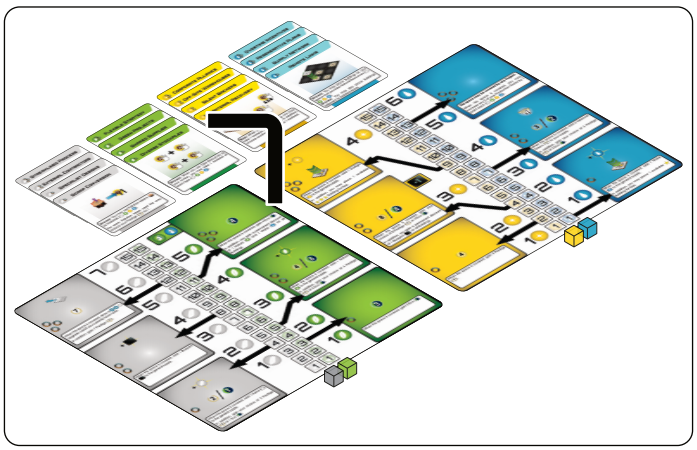

These Resources are the only ones that players can take early in the game (certain game effects and events will add more Resources).

6. Set up the Environment Board somewhere within easy reach of all players.

7. Each player takes a set of player boards, a set of 4 cubes to track their Production (, , ,) and a Project deck.

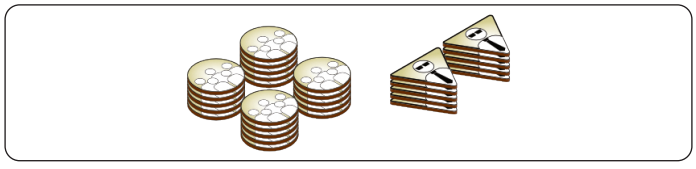

A Project deck contains 16 double-sided Project cards, divided by type (, , ,) and Stage (, , or).

8. Each player chooses a colour and takes all of their tokens (/ &) in that colour.

Each player also takes their Prestige marker (?) and places it on the 0/50 space on the Prestige track (running around the outside of the Environment Board).

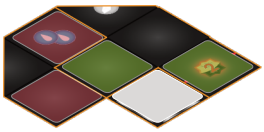

Each player takes a number of Takeover tokens ( ) equal to the number of players in the game, then sets the rest aside.

9. The last person to build something is the first player, and takes the first turn. Gameplay proceeds clockwise from the first player.

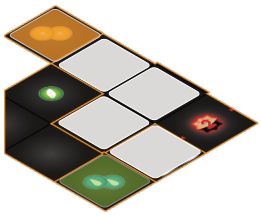

Definitions

Map Spaces & Zones

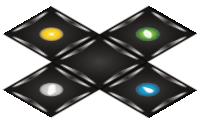

Adjacent: Connected to another map space in a straight line. The green spaces are adjacent to the grey space.

Some game effects may allow you to count diagonal spaces as adjacent.

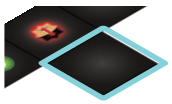

Connected to X: You can trace an unbroken path of adjacent Buildings to X. The orange space is Connected to the green Starting Space.

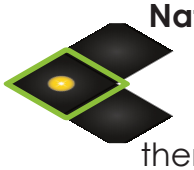

Starting Space: Spaces with silver bordered triangles. The first Buildings placed on the map will be placed in these spaces.

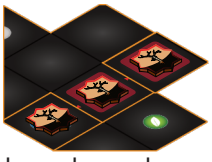

Additional Buildings may be placed in these spaces, or adjacent to existing Buildings.

Empty Space: A map space that contains no gameplay symbols (, , , , or). Uncovered spaces with only a symbol visible are considered empty for all purposes. The blue bordered space is an Empty Space.

Natural Resources: These spaces provide the shown Materials (, , ,), reducing the cost of any Building placed on them. The green bordered space will provide 1 Starlight () for any Building placed there.

Polluted Area: This is a space with a Pollution token (). Buildings cannot be placed in Polluted Areas. The red bordered spaces are Polluted Areas.

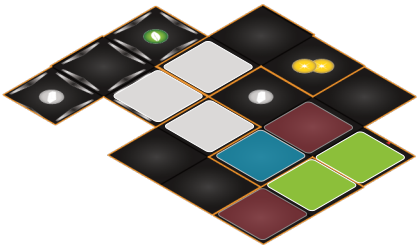

Prestigious Location: These spaces are important and valuable, and increase your Prestige () if you place a Building on them. The yellow bordered space is a Prestigious Location.

Isolated Areas: A group of 3 or less Connected Buildings that are not themselves Connected to any Starting Spaces.

You cannot normally place Buildings adjacent to Isolated Areas unless one of the following is true:

- This Building would connect the Isolated Area with a Starting Space.
- You Own a Building, or have a Shared token () on a Building in the Isolated Area.

The green Buildings, above, form an Isolated Area. Only players that Own or Share those Buildings can place Buildings in the red spaces. Any player may place a Building in the blue space, as it Connects the Isolated Area to a Starting Space.

Tokens & Empty Spaces

A Building can be placed in a map space that only has tokens in it (except Pollution tokens). In this case, all tokens from that space are immediately placed on that Building, with the normal effects they would cause.

This usually happens after a few rounds of Urban Renewal Actions, but can also happen with certain Upgrade cards or Project cards interacting.

Alternate Map Setups

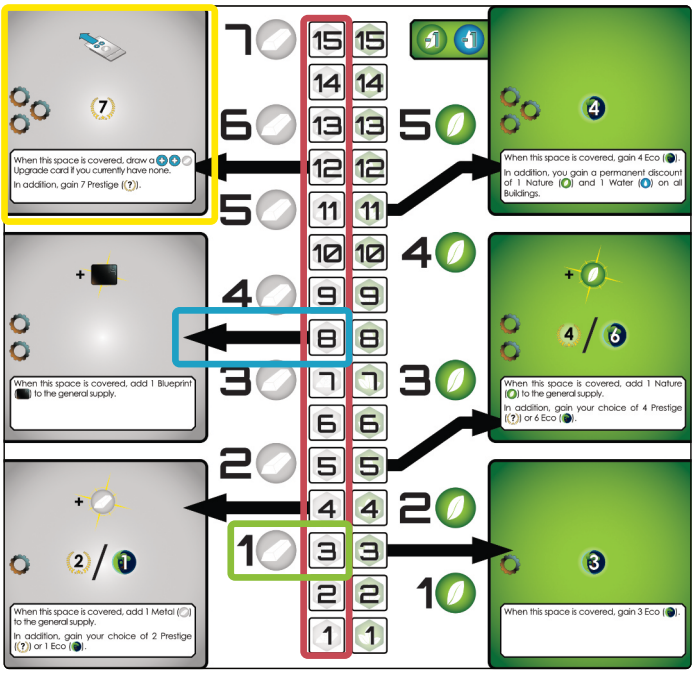

To increase replayability, and add more options, a number of alternate Map Tile configurations are listed below.

Players	'+'	'T'	'L'	'I'
2	6*	0	2	0
2	4*	0	4	2
3	4*	4	4	2
3	6*	4	2	0

*Remove '+' Map Tiles with Prestige () on them first. For an ideally balanced game, the available 'L' tiles should have the same natural resources on them as the removed '+' tiles.

Boards & Tracks

Player Boards

When you remove Pollution tokens ( ) from the map, unless otherwise specified, you set them aside near your player boards.

When you gain Production (, , ,) from a Building or other effect, you increase the indicated Production track by that many points (move the cube up the track by that many spaces).

> The Metal Production track ( ) is outlined in red.

All Production tracks start at 0 (no cube is placed on it yet).

When a Production track reaches a Material threshold (shown with a Material next to the track), then once per turn you can use the indicated number of Materials to help with placing a Building. You may do this for each Production track that provides Materials required by that Building.

> The first Metal Material threshold is outlined in green.

When a Production track reaches a Project threshold (shown with a large arrow) you may use a Bonus Action to cover the indicated slot with a Project card of the indicated Stage (, , or) or lower.

> The second Metal Project threshold (for a (or) Project card) is outlined in blue.
>
> The Stage 3 ( ) Project card slot for Metal is outlined in yellow.

The first time each game that you place a Project card in each slot, you gain the listed bonuses. Once placed, Project cards cannot normally be changed.

> Project cards are double-sided. This is deliberate in order to force important choices around the use of higher Stage slots for lower Stage Project cards, and because certain combinations are considered a little too powerful or flexible.

If a space has 3 Pollution tokens in it, it is considered filled, and any further Pollution tokens are placed in the next space to the right.

> In addition, when a space is filled with Pollution tokens, add 1 Material (, , , ,) of the indicated type to the stack of available Materials (blue square).

Prestige ( )

When you gain, you move your Prestige marker ( ) that many spaces clockwise around the Prestige track.

When you lose Prestige, you move your Prestige marker ( ) that many spaces anti-clockwise around the Prestige track.

If your Prestige marker passes the 50, flip it to the +50 side ( ).

If your Prestige marker ( ) would pass the 50 a second time (while it is showing the +50 side), take a 100 Prestige token.

> This will normally only happen at the very end of the game, either when triggering the end of the game, or adding bonus Prestige.

Ability Types & Limits

General Rules

The text effects of Upgrade cards (or) and Project cards (, , or) are Abilities, and will fall into one of six different types, listed below.

Regardless of an Ability's type, you may make use of its bonus a maximum of once on your own turn, and a maximum of once between each of your turns, unless otherwise specified.

Ability Types

- **When Taken:** This effect applies once, immediately after drawing the card or adding it to a Project card slot on your player board.
- **Passive:** Grants an effect that is always available, and requires no additional effects to activate.
- **Action:** Instead of performing one of the 6 standard Actions, you may choose to perform this Action. You may still perform Bonus Actions.
- **Bonus Action:** Instead of performing one of the 2 standard Bonus Actions, you may choose to perform this Bonus Action. (You are still limited to using a maximum of 2 Bonus Actions on each of your turns).
- **Upgrade:** This modifies how an Action works, or improves other Abilities.
- **Rider:** This happens in response to, or immediately after, a particular Action or event—this may happen on another player's turn.

Rule Hierarchy

If a conflict exists between multiple rules from different sources, the highest source in the following list takes precedence.

- Upgrade cards (or).
- Project cards (, , or).
- Rulebook rules.

Action Sequencing

Actions and Bonus Actions are always fully resolved, applying all Upgrades, Passives, and Riders that are relevant before the next Action or Bonus Action begins.

> Basically, Actions and Bonus Actions cannot be interrupted partway through. Instead, they are fully resolved, then the next effect happens.

Supply Limits

Your Supply can hold a **maximum of 12 Resources** (, , , ,) in any combination.

> Some game effects may increase this limit, and some game effects may allow you to store Materials in other locations, such as on Buildings or cards.

Material bonuses from your Production tracks (, , ,) count as being in your Supply (to allow you to use them), but take up no space in your Supply.

> Material bonuses from your Production tracks **can only be used once per turn**.

All other tokens, cards, and game materials that you have count as being in your Supply, but take up no space in it.

> These items may have their own limits, such as a maximum of 3 Reserved Buildings, or 1 card of each type from Research & Development Actions.

Ending the Game

Ending States

In order to end the game, one of four conditions must be met either during your turn, or at the end of your turn:

- The last space on the map has a Building placed in it, and there are no remaining Map Tiles to be used this game.
- There are no Pollution Tokens ( ) available, but 1 or more still need to be placed on the map.
- The right-most space on the Environment Board is filled with Pollution tokens ( ).
- Your Prestige marker is at or beyond the 50 Prestige space while on its +50 side ().

Actions

On your turn, you may take one of six different Actions, listed below.

Note that certain game effects may modify how you use these Actions, or grant you new, unique Actions to use. Actions are normally shown enclosed by rounded brackets at the corners of the image or text block.

Take Resources

From the Resources available in the general supply, you may use an Action to take either:

- 2 different Materials
- 2 of the same Material, provided at least 2 Material remains in that stack

On most game materials the Take Resources Action is shown with a hand symbol on top of a wild resource symbol.

The Wild Material symbol can show a '?', meaning any Material; a '=', meaning the same Material, or a '≠', meaning a different Material. Most of the time this will be accompanied by a text based explanation to save any confusion.

Supply Limits

Your Supply can normally hold a **maximum of 12 Resources** in any combination.

Running out of Resources

If there are no Resources left in a stack, you cannot take any of that Resource.

If you would take more Resources from a stack than are left in that stack, you simply take whatever is available of that type.

Reserve Building

You may use an Action to take 1 Blueprint and 1 Building from any Tier 1, 2, or 3 (★, ★★, or ★★★) Building Queue.

You may instead use this Action to spend 5 Prestige (?) to take 2 Blueprints and Reserve 1 Tier 4 (★★★★) Building.

Only you may place Buildings that you have Reserved.

You may keep a maximum of 3 Reserved Buildings in your Supply (Tier 4 Buildings count as 2 Buildings for this purpose).

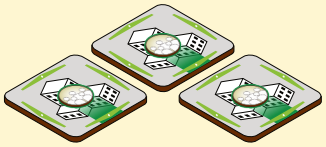

Immediately fill the empty slot in that Building Queue with a new Building card.

On most game materials the Reserve Building Action is shown with an arrow arcing to the left from a Building card.

Research & Development

If you Own 7 or more Buildings of 1 type (, , ,), you may use an Action in order to take the top Level 1 () Upgrade card from the Upgrade deck of the same type.

For every Stage 1 () Project card on your player boards, the required number of Buildings for a Level 1 card is reduced by 1, to a minimum of 1.

If you have 12 or more Buildings of the same type you may take the top level 2 () Upgrade card instead.

For every Stage 2 () Project card on your player boards, the required number of Buildings for a level 2 card is reduced by 2, to a minimum of 4.

You may take a maximum of 4 Upgrade cards in this way during the game. Each Upgrade card taken this way must be of a different type (, , ,).

Mark these cards with a Population token () as a reminder.

Upgrade Card Bonuses

Some Upgrade cards (or) add 1 Production (, , ,) of the appropriate type (shown above the card's text effect) to the relevant track.

Urban Renewal

You may use an Action to place a new Map Tile. This Tile is taken randomly from the stack that holds the largest available tiles.

This Map Tile must be placed so that at least 2 of its spaces are adjacent to at least 1 existing space on the map (green outline above; the red outline shows an illegal placement).

If there are any Pollution token symbols on the new Map Tile, they must be placed adjacent to existing spaces on the map, if possible.

Place a Pollution token ( ) on the appropriate space on the new Map Tile, and on any additional spaces, as indicated by the small red arrows ( ).

Pollution tokens ( ) placed in this way may be placed on top of Buildings.

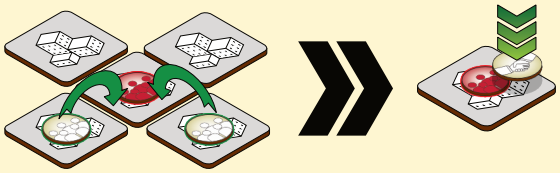

If a Pollution token ( ) would be placed in a gap between Map Tiles, it is instead placed in the closest empty space on the map, of the placing player's choice.

After placing any required Pollution tokens, you may place a Shared token ( ) on any empty space on the new Map Tile.

If no empty spaces remain on the new Map Tile, you may instead place that Shared token ( ) in the closest empty space, of your choice, to that Map Tile.

Once a new Map Tile has been placed, it cannot be moved.

Gather Support

If you have 2 or more Population tokens ( ) adjacent to another player's Building, you may use an Action to place a Shared token ( ) on that Building.

If you do so, each other player with a Population token ( ) or Shared token ( ) already on that Building may take 1 Material of any type (, , ,).

If you place a Shared token ( ) on a Building that is Owned by another player (it has one of their tokens on it), that Building is now a *Shared Building* for you, and you gain the following rewards:

- Advance your Production track (, , , ,) matching that Building's Production reward by 1 space.
- Add any Takeover tokens ( ) that the Building provides to your Supply.
- Gain 1 Eco ( ).

You cannot normally place a Shared token ( ) on one of your Shared Buildings. If some effect allows you to do so, simply gain 1 Eco ( ).

Important: If a game effect allows you to place a Shared token ( ) on a Building Owned by another player, you gain the rewards above as if you had used the Gather Support Action.

Claim Land

If you have 3 or more Population tokens adjacent to any Building, you may use an Action to remove 1 Population token and all Shared tokens from that Building.

If that Building now has 0 Population tokens on it, you may place a Takeover token on that Building.

You gain all Prestige from that Building, and the previous owner loses 1 Prestige, or 2 Prestige if the Building had a reward of 8 or more Prestige.

For each Shared token removed from that Building, give a Pollution token from your Supply to any other player.

If you cannot fulfil the requirement above, or do not wish to, then for each Shared token removed from that Building, place 1 Pollution token anywhere on the map.

That Building is now considered a *Contested Building*, and the following additional effects apply to it:

- Contested Buildings cannot have Population tokens, Shared tokens, or Secured tokens placed on them.
- Contested Buildings are Owned Buildings, but do not count as having any Population tokens on them for any purpose.

Important: There are a maximum of 10 Takeover tokens available to each player. If you would gain a as a reward but have none available, you may instead take 1 Material of any type as compensation.

Eco & Pollution

Each time you gain 1 or more Eco you may choose any options from the list below.

If there are 1 or more Pollution tokens on the map, you must choose the first option at least once.

- Spend 1 Eco to remove 1 Pollution token from anywhere on the map. The Pollution token is added to your Supply.
- Spend 2 Eco to move 1 Pollution token from your Supply to the left-most unfilled space on the Environment Board.
  - Gain the Prestige shown above that space.
  - If you move the specified number of tokens, you gain the listed reward as well.
- Spend 2 Eco to place a random Discount token in an empty space on the map, becoming a Natural Resource.
- Spend 4 Eco to place 2 Discount tokens of your choice in an empty space on the map, becoming Natural Resources.

Fertile Ground

Buildings placed on Discount tokens add those tokens to your Supply.

This effect applies both to tokens used as Natural Resources, and tokens that were placed on Buildings that had another Building placed on top of them.

Secured Buildings

A Building is considered Secured if it has a Secured token on it, or the Secured symbol as one of its rewards.

- Secured Buildings cannot have Shared tokens or Takeover tokens placed on them for any reason.
- Population tokens cannot be removed from Secured Buildings for any reason.

If a Building ever has no Population tokens, Shared tokens, or Takeover tokens on it at the end of any player's turn, that Building is immediately Secured, and is now Owned by no one.

Bonus Actions

On your turn you may take up to two Bonus Actions, each of a different type, listed below.

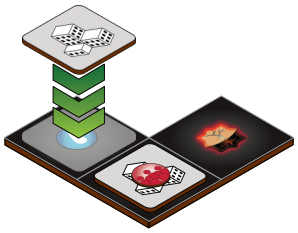

Note that certain game effects may modify how you use these Bonus Actions, or grant you new, unique Bonus Actions to use.

Bonus Actions on various cards are normally shown with a lightning bolt symbol next to their effect.

Place Building

As a Bonus Action you may return Resources (, , , +) from your Supply to the general supply equal to a Building's cost in order to take that Building card from the Building Queue.

After you take a Building card, you may place that Building, either adjacent to an existing Building, or in a Starting Space.

After placing a Building, place one of your Population tokens () on that Building to show that you Own it.

After placing a Building, refill its slot in the Building Queue.

On most game materials the Place Building Bonus Action is shown with a stacked arrow above a Building card.

Note that you may choose to pay the cost of one of your Reserved Buildings in order to place that Building instead of a Building from one of the queues.

Building Rewards

Gain all rewards listed for that Building.

- Add Production (, , ,) from that Building to the appropriate Production track on your player board.
- Gain and use any Eco ().
- Place any Pollution tokens () created by that Building.
- Add any Prestige () to your total Prestige.
- Take any Upgrade cards (or) that this Building allows you to draw.

If a Building requires you to place Pollution tokens (), each token is placed in different space on the map that contains no other Pollution tokens (), and no Buildings.

If there are not enough map spaces without Buildings, you may place the remaining Pollution tokens () on the closest Buildings to the one you just placed, starting with your own Buildings.

Additional Rewards

If you place a Building next to one of your Owned Buildings, you immediately gain 1 Prestige ().

If you place a Building next to another player's Owned Building, you immediately gain 2 Prestige ().

If you placed a Building that completes or extends a line of 3 or more Buildings of the same type (, , ,), you gain an additional reward based on the type of Buildings in that row:

- : Take 1 Blueprint ().
- : Increase Eco () by 1.
- : Gain 1 Prestige ().
- : Take 1 Material (, , ,).

Note that the Buildings that form a line for the above bonus may be Owned by any number of players.

Special Building Placements

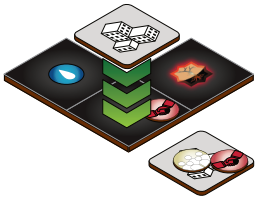

Buildings with the symbol to the left in their reward column must be placed in an Empty Space, creating or extending an Isolated Area, if possible.

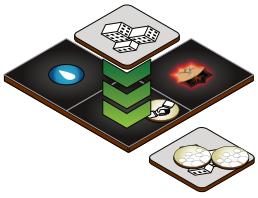

Note that Buildings with this requirement allow you to create Isolated Areas.

Buildings with the symbol to the left in their reward column must be placed on top of lower Tier Buildings of the indicated type.

If a Building is placed on another player's Shared token (), that player immediately gains the benefits of Sharing that Building.

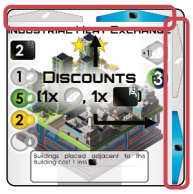

If a Building is placed on your own Shared token (), that token is flipped and it becomes an additional Population token () for you, effectively making that Building harder to take via the Claim Land Action.

Material Discounts

- Buildings on the map will usually provide a Material Discount to any Buildings placed adjacent to them.
- A Building's Material cost is also reduced by 1 for each Natural Resource it is placed on.
- A Building's Material cost is reduced by 1 for each Material threshold/reward you have gained on the matching Production track.
- A Building's Material cost can be reduced by 1 for each Discount token (, , ,) from your Supply that you spend on it. Spent Discount tokens are returned to the general supply.
- You may reduce a Building's Material cost for another player by spending Discount tokens (, , ,) equal to half of that Building's highest Material cost. If you do so, you gain Prestige (?) equal to the Building's Tier (★, ★★, ★★★, ★★★★, or ★★★★★)

Blueprint Discounts

- Buildings on the map may provide a Blueprint () Discount to any Buildings placed adjacent to them.
- Certain Project Cards, Upgrade Cards, and some Production tracks provide permanent discounts of 1 Blueprint ().

Combining Discounts

Regardless of whether it is for Materials (, , ,) or Blueprints (), you may combine any number of discounts from any number of sources (the map, Buildings, your cards, Production tracks, etc).

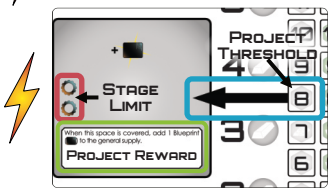

As the game progresses it becomes possible to place Buildings for free. This is entirely intentional, and adds a tactical element of blocking or taking spaces with "low value" Buildings, against spending time to amass resources for the bigger rewards from more expensive Buildings.

Tax the Rich

Regardless of available discounts, if you have 3 or more of a Resource (, , , or) in your Supply, you *must* spend at least 1 of those before applying the reductions above.

This keeps the limited amount of Resources circulating and keeps the economy alive within the game.

Start Project

If one or more of your Production tracks (, , ,) is at or above a Project threshold, you may place a Project card of the appropriate type (, , ,) and stage (, , or) in one of your unlocked Project card slots.

> The first Project card you take each game must be a Stage 1 card ( ). It doesn't matter where you place this card (it could even be placed in a slot), just that the card itself is Stage 1 ( ).

Project Rewards

Gain all rewards listed in the reward box on the Project card slot. Any ongoing rewards will be shown with a little side bar next to the Project card slot.

Most rewards will be a one-off bonus of Prestige ( ), Eco ( ), or adding an extra Material to the general supply.

Victory Conditions

Winning by Prestige

If your Prestige marker is on the +50 side (+50) and is beyond the 50 Prestige space at the end of any of your turns, the game ends, and Prestige (?) is totalled.

Bonus Prestige

Largest Community

If you have the largest Connected group of Owned Buildings, gain 5 Prestige (?).

> If your largest Connected group of Owned Buildings is 3 or more Buildings larger than the next highest player, gain 3 additional Prestige (?).

Most Owned Buildings

For each type (/ / /) of Building that you Own the most of, gain 5 Prestige (?).

> If you Own 3 or more Buildings of a type than the next highest player, gain 3 additional Prestige (?).

Least Contested Buildings

If you have the least Takeover tokens ( ) on the map, gain 3 Prestige (?).

> If the next highest player has 3 or more Takeover tokens ( ) on the map than you, gain 5 additional Prestige (?).

Project Bonuses

On the reverse of all Stage 2 ( ) and Stage 3 ( ) Project cards are additional bonuses. If you have fulfilled the requirements on that card, you may add that bonus to your Prestige (?).

Each card is worth Prestige (?), based on the slot it was placed in:

Card	Slot	Slot	Slot
	1	3	5
	–	2	4
	–	–	3

Final Scores

The player with the highest total Prestige (?) is the winner.

> In the case of a tie, the tied players check to see who has the most Buildings on Prestigious Locations, and that player becomes the winner.

If it is still tied, the win is shared.

Winning by Eco

If the right-most space on the Environment Board is filled with Pollution tokens ( ), the game ends, and the environment is assessed.

> When directed to gain (Shared tokens) by the scoring instructions below, they are placed on your player board. If you run out of in your supply, take them from the map.

Prestige (?) is ignored when winning by Eco.

Environmental Bonuses

Most Districts

For each group of 3 or more Connected Buildings that you Own, gain .

> If you have the most groups of 3 or more Connected Buildings, gain .

Most Shared Buildings

If you have the most Shared tokens ( ) on the map, gain .

> If you have 3 or more Shared tokens ( ) on the map than the next highest player, gain .

Most Upgrades

For each type (/ / /) of Upgrade card (or) that you have the most of, gain .

> If you have 3 or more Upgrade cards (or), in total, than the next highest player, gain .

Most Advanced Projects

If you have the most total amongst all your Project cards, gain .

> If you have 3 or more on your Project cards than the next highest player, gain .

Final Scores

The winner is the player with the most collected on their player board.

In the case of a tie, the win is shared.

Loss Conditions

Losing by Pollution

If the general supply of Pollution tokens ( ) is empty, and 1 or more Pollution tokens would have been placed on your turn, the game ends and Environmental damage is assessed.

When directed to gain (Pollution tokens) by the scoring instructions below, they may be taken from any source, and are placed on your player board.

Environmental Damage

Worst Polluter

If you have the most Owned Buildings that place Pollution tokens ( ) on the map, gain .

Most Contested Buildings

If you have the most Takeover tokens ( ) on the map, gain .

If you have 3 or more Takeover tokens ( ) on the map than the next highest player, gain .

Richest Infrastructure

For each Production track (, , ,) you have that is higher than any other player's, gain .

If you have 2 or more Production tracks (, , ,) that are higher than the next highest player, gain .

The player with the fewest on their player board is considered the least bad player.

Everyone loses, but the least bad player may claim moral victory. In the case of a tie, the moral victory is shared.

Losing by Overpopulation

If the last space on the map is filled at the end of your turn, and no additional Map Sections are available, the game ends and Overpopulation is assessed.

When directed to gain (Population tokens) by the scoring instructions below, they are placed on your player board. If you run out of in your supply, take them from the map.

Overpopulation

Largest Community

If you have the largest Connected group of Owned Buildings, gain .

If your largest Connected group of Owned Buildings is 3 or more Buildings larger than the next highest player, gain .

Most Districts

For each group of 3 or more Connected Buildings that you Own, gain .

If you have the most groups of 3 or more Connected Buildings, gain .

Least Shared Buildings

If you have the least Shared tokens ( ) on the map, gain .

If the next highest player has 3 or more Shared tokens ( ) on the map than you, gain .

The player with the fewest on their player board is considered the least bad player.

Everyone loses, but the least bad player may claim moral victory. In the case of a tie, the moral victory is shared.

Quick Reference

On your turn you may perform 1 Action & 2 Bonus Actions.

Actions

Take Resources (choose one option)

- 2 different Materials (, , ,).
- 2 of the same Material (, , ,), leaving 2 in the stack.

Gather Support

- You must have 2+ Population tokens () adjacent to the target Building.
- Each player with a Population token () or Shared token () on that Building can take 1 Material (, , ,).
- Place a Shared token () on that Building.
  - Gain 1 Production (, , ,) matching that Building's rewards.
  - Gain 1 Eco ().

Reserve Building

- Take a Building card of up to Tier 3 for free. Tier 4 costs 5 Prestige ().
- Take 1 Blueprint (), +1 if Tier 4.

Urban Renewal

- Place a new Map Tile.
- Place Pollution tokens () from that tile. Place a Shared token () in an empty space on that tile.

Research & Development

- You must have 7+ Buildings (-1 per Project, min. 1) of the same type (, , , ,).
- Take the top Upgrade card of that type.
  - If you have 12+ Buildings (-2 per Project, min. 4) of the same type, take the top Upgrade card instead.
- You can take a maximum of 1 Upgrade card of each type this way.

Claim Land

- You must have 3+ Population tokens () adjacent to the target Building.
- Remove 1 Population token () and all Shared tokens () from that Building.
- Place a Takeover token () on that Building.
  - Gain all Prestige from that Building.
  - Previous owner loses 1 Prestige, 2 if that Building gave 8+.
  - For each Shared token () removed from that Building, place 1 Pollution token () anywhere on the map.

Bonus Actions

Each Bonus Action may only be performed once per turn:

Place Building

- Pay that Building's cost (, , , +), after applying all discounts.
  - If you have 3+ of a Material in your Supply, you must first pay with that.
- Place that Building on the map, adjacent to an existing Building.
  - Place a Population token () on that building.
  - Gain rewards listed on that Building.
- Gain additional rewards:
  - +1/2 if placed adjacent to your own/another player's Building.
  - +[Special] if adding to/completing a line of 3+ of the same type.

Start Project

- Check that you have passed a Project threshold on your Production track (, , ,).
- Take that Project card.
  - Gain rewards listed on that Project card slot on your player board.

You may perform your Action and any Bonus Actions in whatever order you prefer.

Maximums

- 12 Resources (, , , +) in your Supply.
