Solarpunk

Rebuilding the Future

A game by Phil Grey
Artwork by Carlos Itsumi

Version 6.5

Game Pieces

21 Map Tiles
- 9 '+' Tiles (1 Starting Tile + 8 designs)
- 4 'T' Tiles (4 designs)
- 4 'L' Tiles (4 designs)
- 4 'I' Tiles (1 design)

8 Player Boards (2 each of 4 types)

16 cubes (4 each in 4 colours)

128 Building Cards
- 48 Tier 1
- 32 Tier 2
- 24 Tier 3
- 16 Tier 4
- 8 Tier 5

64 Upgrade Cards
- 40 Level 1 (10 each of 4 types)
- 24 Level 2 (6 each of 4 types)

64 Project Cards
- 20 Stage 1 (5 each of 2 types)
- 20 Stage 2 (5 each of 2 types)
- 20 Stage 3 (5 each of 2 types)
- 4 Stage 1|3 (Unique Cards)

64 Material Tokens (16 each of 4 types)

24 Tier 2/3 Blueprints (double-sided)

16 Tier 4/5 Blueprints (double-sided)

200 Population/Shared Tokens (50 each in 4 colours)

4 Prestige markers (1 each in 4 colours)

4 100 Prestige Tiles

40 Takeover Tokens (10 each in 4 colours)

30 Secured Tokens

50 Pollution Tokens

80 Discount Tokens (20 each of 4 types)

Setting & Theme

Solarpunk is a game where you take on the role of small community collecting resources and trying to build a better world, first by repurposing old structures and clearing polluted zones, then creating dedicated and environmentally sound buildings that are in harmony with nature.

Buildings generate production, which over time will bring down the costs of larger, more complex structures, and will also allow you to start long lasting projects that can give you advantages for the rest of the game.

Some buildings are special, and will grant you prestige, pushing you closer to victory. Other buildings will improve ecological harmony, or eco. Some buildings have unique upgrades that will allow you to use special game-changing effects once you build them.

Some map spaces, and some early prestige giving buildings will actively harm eco, bringing the environment closer to collapse. Be mindful of this, as it can create a certain difficulty spike in the early game—like in real life, getting people to change habits and adopt new technology is fraught with problems.

You must also be mindful of the total space available to you, because if you fill the last square on the map, everyone loses due to overpopulation. Even the best laid plans can run afoul of people's desire for more space, or bigger families.

This means finding the ability to share buildings, or even being aggressive and taking them over yourself, may be better than trying to build every shiny thing you can lay your hands on. Be willing to try a new strategy if your current plan doesn't seem to be working.

Just as there are several ways to lose, there are also multiple ways to win the game. Adaptability is key to creating a sustainable future, but you can always choose to try and profit from that—or to help everyone save the planet.

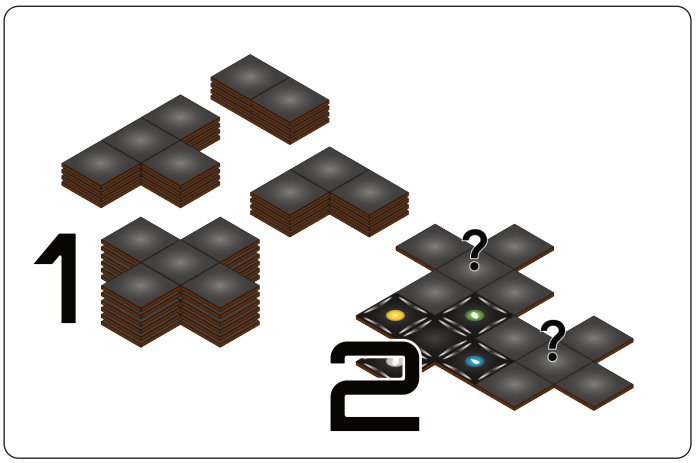

Game Setup

1. Sort out the available Map Tiles based on the number of players in the game.

Players	'+'	'T'	'L'	'I'
2	4*	4	0	0
3	8	0	4	0
4	8	4	4	4

*Remove the 4 '+' Map Tiles with Prestige (?) on them.

2. One player places the starting Map Tile in the middle of the playing area. Each other player places a random '+' Map Tile as if using Urban Renewal.

3. Separate the Upgrade cards by level (+ or ++) and type (, , ,). Shuffle each deck and place them near the map.

4. Separate the Building cards by Tier (★, ★★, ★★★, ★★★★, and ★★★★★) Set aside the ★★★★★ cards then shuffle each remaining deck.

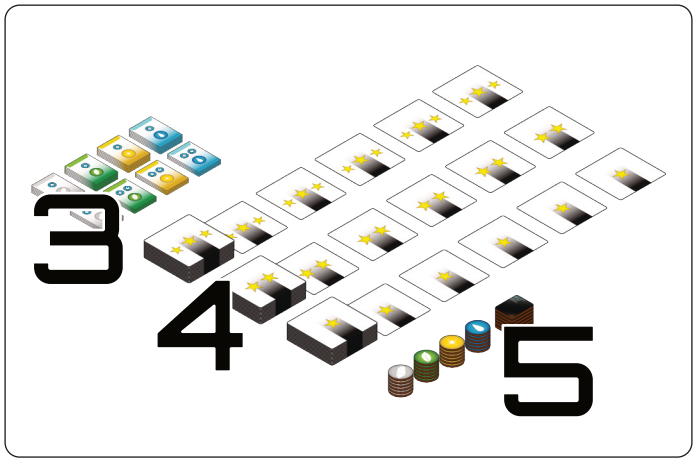

Flip the top 5 cards from each deck and spread them out to create a Building Queue for each Tier.

Sort the ★★★★★ cards by type (, , ,) and place them face up above the Building Queues.

5. Create stacks of starting Materials (, , ,) based on the number of players in the game. These Materials are the only ones that players can take early in the game.

Players	Starting Materials (, , ,)
2	5
3	8
4	12

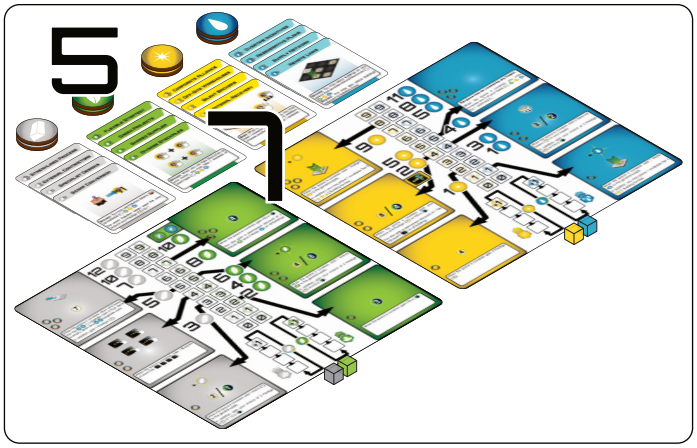

Each player then takes 2 of each Material (, , ,).

6. Set up the Environment Board and supply of Pollution tokens () somewhere within easy reach of all players.

7. Each player takes a set of player boards, a set of 8 cubes to track their Production (, , ,) and Yield (, , ,).

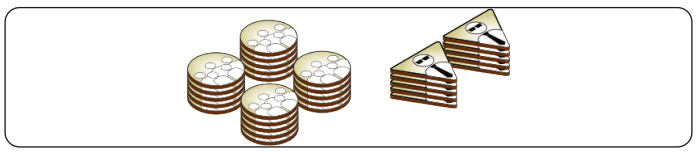

Each player also takes a Project deck that contains 16 double-sided Project cards, divided by type (, , ,) and Stage (, , or).

8. Each player chooses a colour and takes all of their tokens (/ &) in that colour.

Each player also takes their Prestige marker (?) and places it on the 0/50 space on the Prestige track (running around the outside of the Environment Board).

Each player takes a number of Takeover tokens () equal to the number of players in the game, then sets the rest aside.

9. The last person to build something is the first player, and takes the first turn. Gameplay proceeds clockwise from the first player.

Ending the Game

Ending States

In order to end the game, one of four conditions must be met either during your turn, or at the end of your turn:

Victory

You have a total of 100 or more Prestige (?). After adding bonuses, the player with the highest total Prestige is the winner.

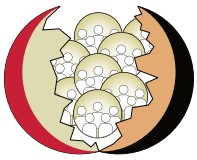

Environmental Victory

The right-most space on the Environment Board is filled with Pollution tokens ( ). Everyone wins.

Pollution Loss

There are no Pollution Tokens ( ) available, but 1 or more still need to be placed on the map. Everyone Loses. The least bad player can claim a moral victory.

Overpopulation Loss

The last space on the map has a Building placed in it, and there are no remaining Map Tiles to be used this game. Everyone Loses. The least bad player can claim a moral victory.

Shorter Games

For a shorter game, make the following changes during setup:

- Remove 20 Pollution tokens ( ) from the game during setup.
- Add 2 additional Materials of each type (, , ,) to the stacks of Starting Materials.

Note the material stacks are still limited by the total number of material tokens, so in a 3 or 4 player some players will not add any to the general supply with their Project Rewards.

The game ends when:

- You have a total of 50 or more Prestige (?).
- The double bordered space on the Environment Board is filled with Pollution tokens ( ).

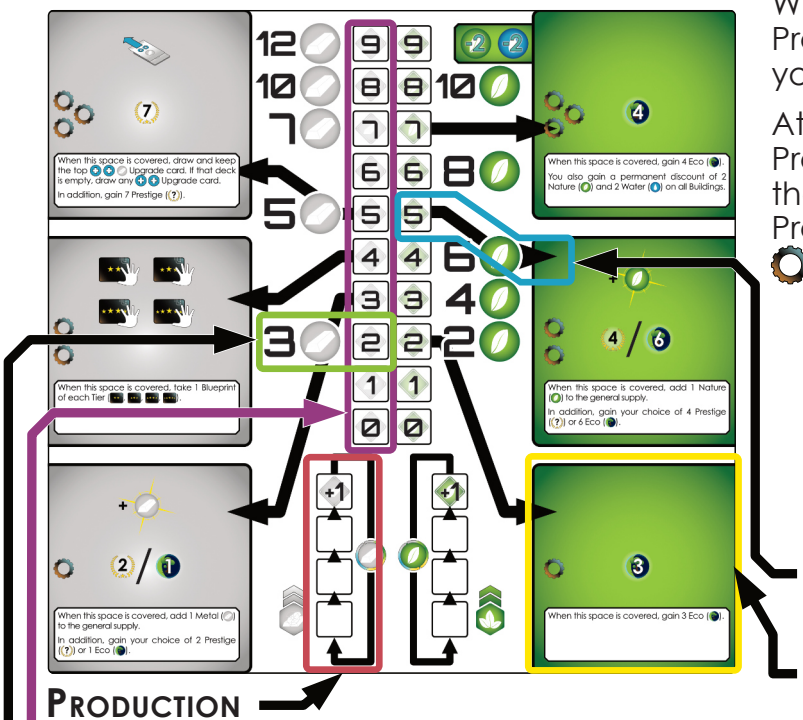

Alternate Map Setups

To increase replayability, and add more options, a number of alternate Map Tile configurations are listed below.

Players	'+'	'T'	'L'	'I'
2	6*	0	2	0
2	4*	0	4	2
3	4*	4	4	2
3	6*	4	2	0

*Remove '+' Map Tiles with Prestige (?) on them first. For an ideally balanced game, the available 'L' tiles should have the same natural resources on them as the removed '+' tiles.

Player Boards

Production

When you gain Production (, , ,) from a Building or other effect, you increase the indicated Production track by that many points (move the cube up the track by that many spaces).

If you would move the cube off the top of the track, it resets to the bottom of the track (as shown by the arrow), and continues moving normally. Each time this happens you gain 1 Discount token of the matching type (, , ,).

The Metal Production track () is outlined in red.

All Production tracks start at 0 (no cube is placed on it yet).

Yield

When a cube is moved to the 4th slot on a Production track (, , ,), you gain 1 Yield (, , ,) of the same type (move the cube up the track by 1 space).

Metal Yield is outlined in purple.

Material Rewards

When your Yield (, , ,) reaches a Material threshold (shown with a Material next to the track), then you can use the indicated number of Materials to help with placing a Building. Each Material provided this way can only be used once per turn.

The first Metal Material threshold is outlined in green, and provides 3 to use during your turn.

Unlocking Project Card Slots

When your Yield (, , ,) reaches a Project threshold (shown with a large arrow) you unlock the associated Project card slot.

At the end of your turn, if you have any Project card slots that do not have a card on them, you may cover one such slot with a Project card of the indicated Stage (, , or) or lower.

Important: The first Project card you take each game must be a Stage 1 card (). It doesn't matter where you place this card (it could even be placed in a slot), just that the card itself is Stage 1 ().

The second Nature Project threshold (for a (or) Project card) is outlined in blue.

The Stage 1 () Project card slot for Nature is outlined in yellow.

Project Rewards

The first time each game that you place a Project card in each slot, you gain the listed bonuses. Any ongoing rewards will be shown with a little side bar next to the Project card slot.

Most rewards will be a one-off bonus of Prestige (), Eco (), or adding an extra Material to the general supply.

All Project cards are double-sided. This is deliberate in order to force important choices around the use of higher Stage slots for lower Stage Project cards, and because certain combinations are considered a little too powerful.

Ongoing Production (Start of Turn)

At the start of each of your turns, if you have at least 1 card (Project or Upgrade) with one of the following symbols, you advance each associated Production track by 1.

Multiple effects granting this bonus (including having multiple cards) can stack up to twice.

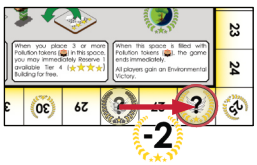

That means you could possibly gain 2 Production of each type at the start of each of your turns.

Environment Board

The Prestige Track (?)

When you gain Prestige (?), you move your Prestige marker (?) that many spaces clockwise around the Prestige track.

When you lose Prestige, you move your Prestige marker (?) that many spaces anti-clockwise around the Prestige track.

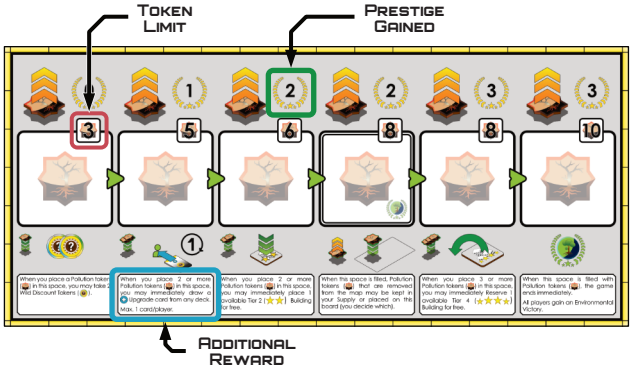

If your Prestige marker passes the 50, flip it to the +50 side (+50).

If your Prestige marker (?) would pass the 50 a second time (while it is showing the +50 side), take a 100 Prestige token and flip it back to its blank side (?).

> This will normally only happen at the end of the game, either when triggering the end, or adding bonus Prestige.

Pollution & Environmental Bonuses

The Environment Board shows the amount of Prestige (?) you gain for placing cleared Pollution tokens ( ) on it, along with additional rewards for placing at least the specified number of tokens in each space.

Each space can only hold a set amount of tokens. If a space is filled, additional tokens will be placed in the left-most unfilled space, generally increasing the Prestige bonus, and granting a more powerful reward.

When placing Pollution tokens ( ) on the Environment Board, you may choose to count them towards a reward from a previously filled space, if desired.

> For example, if the second space (draw an Upgrade card) was filled, then when placing tokens in any space to the right of that, you could count them as being placed in the second space in order to claim that reward.

Eco & Pollution

Earning Eco

Each time you gain 1 or more Eco ( ) you may choose any options from the list below.

- Spend 1 Eco ( ) to remove 1 Pollution token ( ) from anywhere on the map. The Pollution token is added to your Supply.
  - Gain the Prestige (?) shown above the left-most unfilled space on the Environment Board.

Important: You must choose the above option at least once if there are any Pollution tokens ( ) on the map.

- Spend 1 Eco ( ) to move 1 Pollution token ( ) from your Supply to the left-most unfilled space on the Environment Board.
  - If you place the specified number of tokens on the Environment Board, you gain the reward listed below that space.
- Spend 1 Eco ( ) to gain a Wild Discount token ( ).
  - You cannot choose this option if you have any Pollution tokens ( ) in your Supply.
- Spend 2 Eco ( ) to place a Discount token (, , ,) of your choice in an empty space on the map, becoming a Natural Resource.

Placing Pollution

If an effect (such as placing a Building) requires you to place Pollution tokens ( ), each token is taken from the general supply and placed in a different space on the map that contains no other Pollution tokens ( ), and no Buildings.

> If there are not enough map spaces without Buildings, you may place the remaining Pollution tokens ( ) on the closest Building(s) to any Pollution tokens ( ) already on the map.

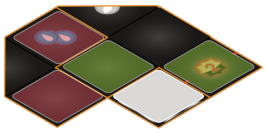

Fertile Ground

Buildings placed on Discount tokens (or , , ,) add those tokens to your Supply.

> This effect applies both to tokens used as Natural Resources, and tokens that were placed on Buildings that had another Building placed on top of them.

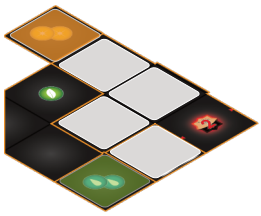

Map Definitions

Spaces & Zones

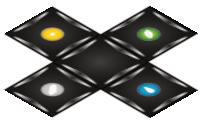

Adjacent: Connected to another map space in a straight line. The green spaces are adjacent to the grey space.

Some game effects may allow you to count diagonal spaces as adjacent.

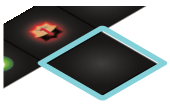

Connected to X: You can trace an unbroken path of adjacent Buildings to X. The orange space is Connected to the green Starting Space.

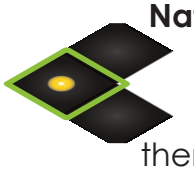

Starting Space: Spaces with silver bordered triangles. The first Buildings placed on the map will be placed in these spaces.

Additional Buildings may be placed in these spaces, or adjacent to existing Buildings.

Empty Space: A map space that contains no gameplay symbols (, , , , or). Uncovered spaces with only a symbol visible are considered empty for all purposes. The blue bordered space is an Empty Space.

Natural Resources: These spaces provide the shown Materials (, , ,), reducing the cost of any Building placed on them. The green bordered space will provide 1 Starlight () for any Building placed there.

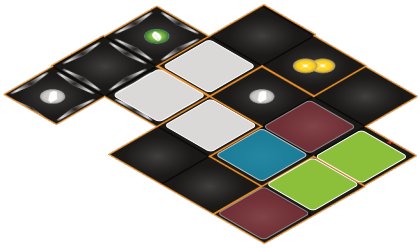

Polluted Area: This is a space with a Pollution token (). Buildings cannot be placed in Polluted Areas. The red bordered spaces are Polluted Areas.

Prestigious Location: These spaces are important and valuable, and increase your Prestige () if you place a Building on them. The yellow bordered space is a Prestigious Location.

Isolated Areas: A group of 3 or less Connected Buildings that are not themselves Connected to any other Buildings or Starting Spaces.

The green Buildings, above, form an Isolated Area.

A Building placed in either of the red spaces would extend the area.

If Buildings were placed in both red spaces the green Buildings would stop being an Isolated Area as they are now a group of 4 Buildings.

A Building placed in the blue space would stop the green Buildings counting as an Isolated Area, as it Connects them to a Starting Space.

Tokens & Empty Spaces

A Building can be placed in a map space that only has tokens in it (except Pollution tokens). In this case, all tokens from that space are immediately placed on that Building, with the normal effects they would cause.

This usually happens after a few rounds of Urban Renewal Actions, but can also happen with certain Upgrade cards or Project cards interacting.

Secured Buildings

A Building is considered Secured if it has a Secured token () on it, or the Secured symbol as one of its rewards.

- Secured Buildings cannot have Shared tokens () or Takeover tokens () placed on them for any reason.
- Population tokens () cannot be removed from Secured Buildings for any reason.

If a Building ever has no Population tokens (), Shared tokens (), or Takeover tokens () on it at the end of any player's turn, that Building is immediately Secured, and is now Owned by no one.

Turn Sequence

- Perform any start of turn effects (*page 6*). This step is usually limited to gaining Production via , , , or .
  - Gain 5 Energy ().
  - Spend Energy () on Actions (*pages 10-15*). Some actions can only be used a limited number of times per turn (shown by).
- If you have any unlocked Project card slots without a card on them, place a Project card covering 1 of those slots (*page 6*).
- Reduce your Energy () to 0. End your turn. Check for endgame triggers (*page 5, pages 16-17*). Play passes to the player on your left.

Ability Types & Limits

General Rules

The text effects of Upgrade cards (or) and Project cards (, , or) are Abilities, and will fall into one of five different types, listed below.

Regardless of an Ability's type, you may make use of its bonus a maximum of once on your own turn, and a maximum of once between each of your turns, unless otherwise specified.

Ability Types

- **When Taken:** This effect applies once, immediately after drawing the card or adding it to a Project card slot on your player board.
- **Passive:** Grants an effect that is always available, and requires no additional effects to activate.
- **Action:** Instead of performing one of the standard Actions, you may choose to perform this Action. The energy cost and any restrictions will be listed.
- **Upgrade:** This modifies how an Action works, or improves other Abilities.
- **Rider:** This happens in response to, or immediately after, a particular Action or event—this may happen on another player's turn.

Rule Hierarchy

If a conflict exists between multiple rules from different sources, the highest source in the following list takes precedence.

- Upgrade cards (or).
- Project cards (, , or).
- Rulebook rules.

Supply Limits

Materials

Your Supply can hold a **maximum of 12 Materials** (, , ,) in any combination.

Some game effects may increase this limit, and some game effects may allow you to store Materials in other locations, such as on Buildings or cards.

Blueprints

Note that unlike Materials, Blueprints (, , , ,) do not take up any space in your Supply.

Downgrading Blueprints

Blueprints may be used as either their matching Tier (, , , or), or as if they were any lower Tier.

Discount Tokens & Yield

Discount tokens (or , , ,) take up no space in your Supply.

Material bonuses from your Yield (, , ,) function as discounts, and so take up no space in your Supply.

Material bonuses from your yield **can only be used once per turn**.

Other Tokens & Cards

All other tokens, cards, and other game materials that you have count as being in your Supply, but take up no space in it.

These items may have their own limits, such as a maximum of 3 Reserved Buildings, or 1 card of each type from Research & Development Actions. These limits may also be modified by other game effects.

Actions

At the start of each of your turns, you gain 5 Energy (⚡) to use on performing various Actions, listed below. Each Action costs a certain amount of Energy (⚡), and may have limits on the number of times it can be used each turn (⊗).

If an Action has an Energy cost (⚡) with an asterisk (*) next to it, then that Action's Energy cost (⚡) can be modified by certain effects.

You do not have to use all your Energy each turn, but at the end of each of your turns, any unspent Energy (⚡) is lost.

Note that certain game effects may modify how you use these Actions, grant you additional Energy each turn or give you new, unique Actions to use.

While the possible use of 11 Actions may seem daunting, most of them are actually very simple in gameplay, either taking something from supply, taking a card by paying a cost, or manipulating the map in some way (adding tokens to Buildings, for example).

If you want a much simpler first game, we recommend using only the **Take Resources**, **Reserve Building**, **Place Building**, and **Urban Renewal** Actions. These 4 Actions drive the core of the game.

Note that his may make it difficult to gain Nature and Starlight Production (🌿, ✨) early in the game. If you find that an issue, add the **Gather Support** Action to the basic four.

Action Sequencing

Actions are always fully resolved, applying all Upgrades, Passives, and Riders that are relevant before the next Action begins.

In short, Actions cannot be interrupted while they are partway through. Instead, they are fully resolved, then the next Action begins.

There is one specific card effect that breaks this rule: *Official Veto*. As it can prevent the text effect of another card, it must be allowed to break this rule in order to actually work as intended.

⚡⚡ ① Take Resources

From the Materials available in the general supply, you may use an Action to either:

- Take any 2 Materials (🪨, 🌿, ✨, 💧)
- **OR:** If you have 2 or less Materials (🪨, 🌿, ✨, 💧), pay 1 Energy (⚡) and take any 4 Materials.

Important: In either case, if you take multiples of the same Material (🪨, 🌿, ✨, 💧), you must leave at least 1 of that Material in the stack.

On most game materials the Take Resources Action is shown with a hand symbol on top of a wild material symbol.

The Wild Material symbol can show a '?', meaning any Material; a '=', meaning the same Material, or a '≠', meaning a different Material. Most of the time this will be accompanied by a text based explanation to save any confusion.

Supply Limits

Your Supply can normally hold a **maximum of 12 Materials** (🪨, 🌿, ✨, 💧) in any combination.

Blueprints (★★, ★★★, ★★★★, ★★★★★) do not take up any space in your Supply.

Running out of Resources

If there are no Materials (🪨, 🌿, ✨, 💧) left in a stack, you cannot take any of that Material.

If you would take more Materials from a stack than are left in that stack, you simply take whatever is available of that type.

⚡∞ Local Trades

You may use an Action to give 1 Material of any kind (🪨, 🌿, ✨, 💧) to another player. They must give you a different Material if they are able to.

This trade may be negotiated on any basis, but is always a 1-for-1 trade.

Reserve Building

From the Building cards currently available in the Building Queues you may use an Action to either:

- Take 1 Building from the Tier 2 or Tier 3 (★★ or ★★★) Building Queue, and a Blueprint of the same Tier (★★, ★★★).
- **OR:** Spend 5 Prestige (?) to Reserve 1 Tier 4 (★★★★) Building and take 1 Tier 4 Blueprint (★★★★).

Immediately fill the empty slot in the Building Queue with a new Building card.

Only you may place Buildings that you have Reserved.

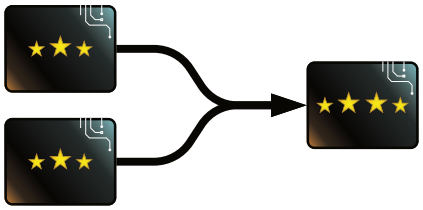

You may keep a maximum of 3 Reserved Buildings in your Supply.

If you have the maximum number of Reserved Buildings in your Supply then you cannot perform this Action.

On most game materials the Reserve Building Action is shown with an arrow arcing to the left from a Building card.

Generate Advanced Blueprints

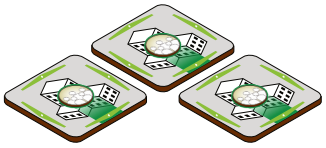

As an Action, you may exchange 2 Blueprints of the same Tier for one Blueprint that is 1 Tier higher.

For example, you could combine two Tier 2 Blueprints (★★) into a single Tier 3 Blueprint (★★★).

Research & Development

Important: For each Upgrade card you have gained using this Action (the card has a token on it), you gain a refund of 1 Energy (⚡) when using this Action.

You may use an Action to take the top Level 1 (+) Upgrade card from any deck.

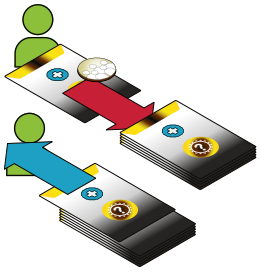

You must meet the following requirements to do so:

- You Own a total of 4 or more Buildings and Project cards, in any combination, matching the type (, , ,) of Upgrade card you draw.
- You must spend at least 1 Tier 2 Blueprint (★★). For each additional ★★ spent, you may draw 1 additional card.
  - You may instead spend 1 Tier 3 or Tier 4 Blueprint (★★★ or ★★★★) to search that deck for a single card to keep.
- Keep 1 card that you drew and return the others to the bottom of that deck.

You may take a maximum of 4 Upgrade cards in this way during the game. Each Upgrade card taken this way must be of a different type (, , ,).

Mark these cards with a Population token () as a reminder.

Parallel Research

You may use an Action to return an Upgrade Card taken using the Research & Development Action to the bottom of the appropriate deck.

You may then draw a replacement card from the top of that deck. This new card still counts as being taken by the Research & Development Action—place a Population token () on it.

Important: If you use this Action a second time on your turn, you must choose a different type (, , ,) of Upgrade card to return each time you use it.

Place Building

Important: This Action's Energy cost (⚡) is equal to the Tier (★, ★★, ★★★, ★★★★, or ★★★★★) of the Building being placed.

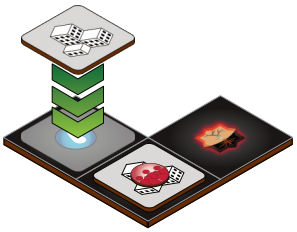

Costs

As an Action you may return Materials (, , ,) and Blueprints (, , ,) from your Supply to the general supply equal to a Building's cost in order to take that Building card from the Building Queue and place it on the map.

You may spend Discount tokens (, , ,) as if they were Materials of the same type. Spent Discount tokens are returned to the general supply. Wild Discount tokens () can be used as any Material (, , ,).

If a particular cost is blank or empty (the space for it has a grey border), then that Building does not require that Material and/or does not require any Blueprints.

After you take a Building card, you may place that Building in any space that does not contain either another Building, or a Pollution token ().

After placing a Building, place one of your Population tokens () on that Building to show that you Own it.

Refresh Building Queue

After placing a Building, refill its slot in the Building Queue with the next Building from that top of that deck.

On most game materials the Place Building Bonus Action is shown with a stacked arrow above a Building card.

Note that you may choose to pay the cost of one of your Reserved Buildings in order to place that Building instead of a Building from one of the queues.

Building Rewards

Rewards

Gain all rewards listed for that Building.

- Add Production (, , ,) from that Building to the appropriate Production track on your player board.
- Gain and use any Eco ().
- Place any Pollution tokens () created by that Building.
- Add any Prestige () to your total Prestige.
- Take any Upgrade cards (or) that this Building allows you to draw.

If a Building requires you to place Pollution tokens (), each token is taken from the general supply and placed in a different space on the map that contains no other Pollution tokens (), and no Buildings.

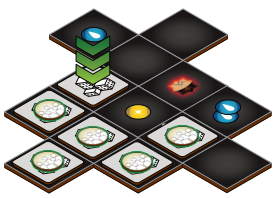

If there are not enough map spaces without Buildings, you may place the remaining Pollution tokens () on the closest Buildings to the one you just placed, starting with your own Buildings.

Additional Rewards

You always gain a Blueprint 1 Tier above the Building you just placed, i.e.: if you placed a Tier 2 Building (★★), you would then gain a Tier 3 Blueprint ().

If you placed a Building next to one of your Owned Buildings, you immediately gain 1 Prestige ().

If you placed a Building next to another player's Owned Building, you immediately gain 3 Prestige ().

The above Prestige () is not cumulative. You gain either 1 or 3 Prestige based on the presence of other Buildings. If both effects apply, gain the higher amount.

Special Building Placements

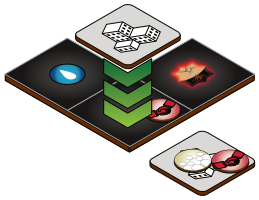

Buildings with the symbol to the left in their reward column must be placed in an Empty Space, creating or extending an Isolated Area, if possible.

Buildings with the symbol to the left in their reward column must be placed on top of lower Tier Buildings of the indicated type.

If you Owned the lower Tier Building, its Population token ( ) is added to the new Building.

If the lower Tier Building was Owned by another player, their Population token ( ) is placed next to yours, and they gain the benefits of Sharing the new Building. You *both* count as Owning the new Building for all rules purposes.

If a Building is placed on another player's Shared token ( ), that player immediately gains the benefits of Sharing that Building.

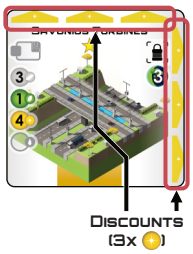

If a Building is placed on your own Shared token ( ), that token is flipped and it becomes an additional Population token ( ) for you, effectively making that Building harder to take via the Claim Land Action.

Tax the Rich

Regardless of available discounts given below, if you have 3 or more of a specific Material (, , ,) in your Supply, you *must* spend at least 1 of those before you can apply any discounts.

Material Discounts

- Buildings on the map will usually provide a Material Discount to any Buildings placed adjacent to them.
- A Building's Material cost is also reduced by 1 for each Natural Resource it is placed on.
- A Building's Material cost is reduced by the Material thresholds/rewards you have gained from your Yield (, , ,).
- You may reduce a Building's Material cost for another player by spending Discount tokens (or , , ,) equal to half of that Building's highest Material cost. If you do so, you gain Prestige ( ) equal to the Building's Tier (, , , , or)

Blueprint Discounts

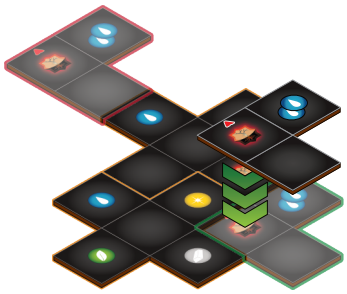

- Buildings on the map may provide a Blueprint (, , , or) Discount to any Buildings placed adjacent to them. This Blueprint is considered to be the same Tier as the Building, and will also be noted in the Building's text box.
- Certain Project Cards, Upgrade Cards, and some Production tracks provide permanent discounts of 1 Blueprint (, , , or). This Blueprint's Tier will be indicated on that card as appropriate.

Combining Discounts

Regardless of whether it is for Materials (, , ,) or Blueprints (, , ,), you may combine any number of discounts from any number of sources (the map, Buildings, your cards, Yield, etc).

① Urban Renewal

You may an Action to place a new Map Tile. This Tile is taken randomly from the stack that holds the largest available tiles.

This Map Tile must be placed so that at least 2 of its spaces are adjacent to at least 1 existing space on the map (green outline above; the red outline shows an illegal placement).

If there are any Pollution token symbols ( ) printed on the new Map Tile, then they must be placed adjacent to existing spaces on the map, if possible.

Placing Pollution

Place a Pollution token ( ) from the general supply on the indicated space on the new Map Tile, and on any additional spaces, as indicated by the small red arrows ( ).

> Pollution tokens ( ) placed in this way may be placed on top of Buildings.
>
> If a Pollution token ( ) would be placed in a gap between (or off of) Map Tiles, it is instead placed in the closest empty space on the map, of the placing player's choice.

Staking a Claim

After placing any required Pollution tokens ( ), you may place a Shared token ( ) on any empty space on the new Map Tile.

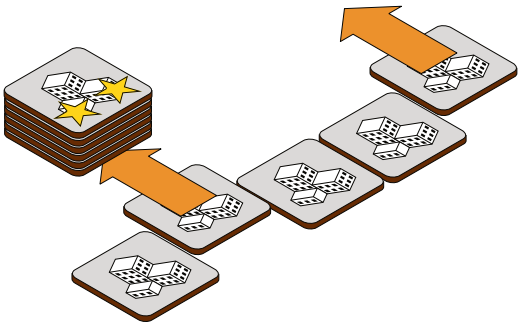

> If no empty spaces remain on the new Map Tile, you may instead place that Shared token ( ) in the closest empty space, of your choice, to that Map Tile.

Once a new Map Tile has been placed, it cannot be moved.

Rapid Expansion

> **Important:** If there are 2 or less empty spaces at the start of your turn, and any Map Tiles remain in the game, you may immediately perform this Action for free—it uses no Energy ( ) this turn.

② City Planning

As an Action, you may spend 1 Blueprint of Tier 2, 3, or 4 (, ,) in order to return up to 2 Buildings of the same Tier (, , or) from the Building Queue to the bottom of the appropriate deck.

You may instead spend a Blueprint of any Tier (, , ,) in order to return that many Tier 1 ( ) Buildings to the bottom of the Tier 1 Building deck.

> For example, a Tier 3 Blueprint ( ) would allow you to return and refresh 3 Tier 1 ( ) Buildings.

After using either option, refresh the Building Queue as normal.

> **Important:** If you use this Action a second time on your turn, you must choose a different Tier Building Queue.

Gather Support

Choose a Building that is Owned by another player (it has one of their tokens on it) and is adjacent to one of your Owned Buildings. This is the target Building.

You may use an Action to place a Shared token on the target Building.

The Owner of the target Building may place a Shared token on one of your Buildings that is adjacent to the target Building.

> **Important:** If you have 2 or more Population tokens adjacent to the target Building, then the Owner of the that Building places no Shared tokens as part of this Action.

Shared Building Rewards

The target Building is now a *Shared Building* for you, and you gain the following rewards:

- Gain Production (, , ,) equal to half of the target Building's Production reward, rounding up.
  - If the target Building has no Production reward (it has no , , , or symbols), instead gain Production equal to that Building's Material Discount.
- Gain 1 Eco ().

Material Benefits

After gaining the rewards above, each player with at least 1 Population token on the target Building may take 1 Discount token for each Shared token now on that Building.

> You cannot normally place a Shared token on one of your Owned or *Shared Buildings*. If some effect allows you to do so, simply gain 1 Eco instead.

> **Important:** If a game effect allows you to place a Shared token on a Building Owned by another player, you gain the rewards above as if you had used the Gather Support Action.

Claim Land

Choose a Building that is Owned by another player (it has one of their tokens on it) and is adjacent to one of your Owned Buildings. This is the target Building.

If you have 3 or more Population tokens adjacent to the target Building, you may use an Action to remove 1 Population token and all Shared tokens from that Building.

If the target Building now has 0 Population tokens on it, you may place a Takeover token on that Building.

You gain all Prestige from the target Building, and the previous owner loses 1 Prestige, or 2 Prestige if that Building had a reward of 8 or more Prestige.

> For each Shared token removed from the target Building, give a Pollution token from your Supply to another player.
>
> If you cannot fulfil the requirement above, or do not wish to, then for each Shared token removed from the target Building, place 1 Pollution token from the general supply anywhere on the map.

Contested Building Limits

The target Building is now considered a *Contested Building*, and the following additional effects apply to it:

- Contested Buildings cannot have Population tokens, Shared tokens, or Secured tokens placed on them.
- Contested Buildings are Owned Buildings, but do not count as having any Population tokens on them for any purpose.

> **Important:** There are a maximum of 10 Takeover tokens available to each player. If you would gain a as a reward but have none available, you may instead take 1 Wild Discount token as compensation.

Victory

Winning by Prestige

If you have a total of 100 or more Prestige (?) at the end of any of your turns, the game ends, and Prestige (?) is totalled.

In a short game, you need only 50 Prestige (?) to end the game.

Bonus Prestige

Largest Community

If you have the largest Connected group of Owned Buildings, gain 5 Prestige (?).

If this is tied, both players gain 3 Prestige (?) instead of 5.

If your largest Connected group of Owned Buildings is 3 or more Buildings larger than the next highest player, gain 3 additional Prestige (?).

Most Owned Buildings

For each type (/ / /) of Building that you Own the most of, gain 5 Prestige (?).

If this is tied, both players gain 3 Prestige (?) instead of 5.

If you Own 3 or more Buildings of a type than the next highest player, gain 3 additional Prestige (?).

Least Contested Buildings

If you have the least Takeover tokens ( ) on the map, gain 3 Prestige (?).

If the next highest player has 3 or more Takeover tokens ( ) on the map than you, gain 5 additional Prestige (?).

Project Bonuses

Each card is worth Prestige (?), based on the slot it was placed in:

Card	Slot	Slot	Slot
	1	3	5
	–	2	4
	–	–	3

Final Scores

The player with the highest total Prestige (?) is the winner.

In the case of a tie, the win is awarded to the player with the most Upgrade cards (or).

If it is still tied, the win is shared.

Environmental Victory

Winning by Eco

If the right-most space on the Environment Board is filled with Pollution tokens ( ), the game ends, and the environment is assessed.

In a short game, only the Environment Board space with the double border needs to be filled. It also has a faded icon as a reminder of this.

The local environment has been healed, and everyone wins together.

More competitive players may wish to use the scoring system below.

When directed to gain (Shared tokens) by the scoring instructions below, they are placed on your player board. If you run out of in your supply, take them from the map.

Prestige (?) is ignored when winning by Eco.

Environmental Bonuses

Most Districts

For each group of 3 or more Connected Buildings that you Own, gain .

If you have the most groups of 3 or more Connected Buildings, gain .

If this is tied, both players gain .

Most Shared Buildings

If you have the most Shared tokens ( ) on the map, gain .

If this is tied, both players gain .

If you have 3 or more Shared tokens ( ) on the map than the next highest player, gain .

Most Upgrades

For each type (/ / /) of Upgrade card (or) that you have the most of, gain .

If this is tied, neither player gains .

If you have 3 or more Upgrade cards (or), in total, than the next highest player, gain .

Final Scores

The winner is the player with the most collected on their player board.

In the case of a tie, the win is shared.

Pollution Loss

Losing by Pollution

If the general supply of Pollution tokens ( ) is empty, and 1 or more Pollution tokens would have been placed on your turn, the game ends and Environmental damage is assessed.

In a short game, there are less total tokens available during the game. This does not change the game end condition.

When directed to gain (Pollution tokens) by the scoring instructions below, they may be taken from any source, and are placed on your player board.

Environmental Damage

Worst Polluter

If you have the most Owned Buildings that place Pollution tokens ( ) on the map, gain .

If this is tied, both players gain .

Most Contested Buildings

If you have the most Takeover tokens ( ) on the map, gain .

If this is tied, both players gain .

If you have 3 or more Takeover tokens ( ) on the map than the next highest player, gain .

Richest Infrastructure

For each Yield (, , ,) you have that is higher than any other player's, gain .

If you have 2 or more Yields (, , ,) that are higher than the next highest player, gain .

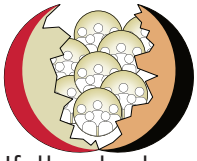

Most Advanced Projects

If you have the most total amongst all your Project cards, remove from your player board.

If you have 3 or more on your Project cards than the next highest player, remove from your player board.

The player with the fewest on their player board is considered the least bad player.

Everyone loses, but the least bad player may claim moral victory. In the case of a tie, the moral victory is shared.

Overpopulation Loss

Losing by Overpopulation

If the last space on the map is filled at the end of your turn, and no additional Map Tiles are available, the game ends and Overpopulation is assessed.

When directed to gain (Population tokens) by the scoring instructions below, they are placed on your player board. If you run out of in your supply, take them from the map.

Overpopulation

Largest Community

If you have the largest Connected group of Owned Buildings, gain .

If this is tied, both players gain .

If your largest Connected group of Owned Buildings is 3 or more Buildings larger than the next highest player, gain .

Most Districts

For each group of 3 or more Connected Buildings that you Own, gain .

If you have the most groups of 3 or more Connected Buildings, gain .

If this is tied, both players gain .

Least Shared Buildings

If you have the least Shared tokens ( ) on the map, gain .

If this is tied, neither player gains .

If the next highest player has 3 or more Shared tokens ( ) on the map than you, gain .

The player with the fewest on their player board is considered the least bad player.

Everyone loses, but the least bad player may claim moral victory. In the case of a tie, the moral victory is shared.

Action List

Take Resources

- Take any 2 Materials.
- **OR:** If you have 2 or less Materials, pay 1 Energy and take any 4 Materials.

Local Trades

- Give another player 1 Material of any type.
  - That player must give you a different Material, if possible.

Reserve Building

- Take 1 Building from the Tier 2 or Tier 3 Building Queue, and a Blueprint of the same Tier.
- **OR:** Spend 5 Prestige to Reserve 1 Tier 4 Building and take 1 Tier 4 Blueprint.

Generate Advanced Blueprints

- Exchange 2 Blueprints of the same Tier for a single Blueprint 1 Tier higher.

Research & Development*

Note: -1 cost per card you have with a token on it.

- You have 4+ Buildings & Project cards, in total, of the same type.
- Draw the top Upgrade card of that type for each you spend.
  - You may instead spend 1 to search the deck for 1 card.
- Keep 1 card, return the rest to the bottom of the deck.
- Max. 1 Upgrade card of each type. (mark with a token).

Parallel Research

- Return an Upgrade card gained via Research & Development to draw a new card of the same type.
  - The new card is still marked with a token.

City Planning

- Spend a Blueprint to return 2 Buildings of that Tier from the Queue to their deck.

Place Building*

Note: cost equals Building Tier.

- Choose a Building card from any Building Queue.
- Apply any relevant discounts.
- Pay remaining costs.
  - Place Building on map, in any space without any tokens and without any Buildings.
  - Gain 1 Blueprint of Building Tier +1.
  - Gain Building Rewards.
    - Gain Prestige () based on adjacent Buildings: 1 if any are Owned by you; 3 if 1+ Owned by other player(s).

Urban Renewal

- Place a new Map Tile.
- At least 2 space must touch existing map spaces.
- Any spaces with symbol must touch an existing map space, if possible.
  - Place tokens as directed by symbol and .
  - Place a token in any empty space on new Map Tile, if possible.

Gather Support*

- Place a token on a Building adjacent to your Owned Building.
  - Gain half (rounding up) of that Building's Production reward ().
  - If no Production reward, gain Production equal to that Building's edge discount.
  - Gain 1 Eco ().

Claim Land*

Note: You must have 3+ Population tokens () adjacent to the target Building to use this Action.

- Remove 1 Population token () and all Shared tokens () from that Building.
- Place a Takeover token () on that Building.
  - Gain all Prestige from that Building.
  - Previous owner loses 1 Prestige, 2 if that Building gave 8+.
  - For each Shared token () removed from that Building, place 1 token.
